

SAI FlexiPRINT is a reliable and powerful software that provides users with the tools they need to produce professional-grade prints efficiently and effectively.

With FlexiPRINT, users can create high-quality graphics from scratch or import existing designs and modify them as needed. The software includes features such as color management, image nesting, and contour cutting, which enable users to produce complex and visually striking designs with ease.

SAI FlexiPRINT is a comprehensive software designed for digital printing. Here are some of its main features:

Design and Layout Tools: FlexiPRINT offers a range of design tools for creating high-quality graphics, including vectorization, image editing, and text layout. Users can import or create their own graphics and logos and manipulate them with ease.

Color Management: FlexiPRINT offers a powerful color management system that allows users to create accurate, consistent colors across multiple printers, media types, and inksets. Users can also manage spot colors and apply ICC profiles to ensure color accuracy.

Print and Cut Workflow: FlexiPRINT offers a streamlined workflow for printing and cutting graphics. Users can send designs directly to the printer and cutter, or they can nest multiple designs for efficient printing and cutting.

RIP and Print Queues: FlexiPRINT includes a RIP (raster image processor) that enables fast and efficient printing. Users can also create print queues to manage multiple print jobs and ensure efficient use of printing resources.

Overall, SAI FlexiPRINT is a powerful and versatile software designed for digital printing professionals. Its range of design and layout tools, color management, print and cut workflows, and compatibility make it an essential tool for large-format printing projects.
